

Prefinished

WOOD VENEER EDGING

Edgemate's Prefinished Wood Veneer coils are made in the USA and feature a specially saturated fleece membrane, carefully selected premium grade veneers and expertly matched, virtually undetectable finger joints. This premium grade edging is prefinished with a state of the art PUR-UV HotCoat technology. PUR HotCoating is the process in which a Polyurethane HotCoat is applied to the surface of the veneer, followed by a clear coat UV lacquer applied on top of the HotCoat. The PUR HotCoat creates a bond with the wood veneer which increases the flexibility, wear resistance, and shock resistance of the finish.

Prefinished edgebanding eliminates finishing time and reduces environmental concerns and difficulties associated with edge finishing. The PUR-UV finish brings out the natural beauty of the real wood and provides higher flexibility and durability. Prefinished veneer edgings are also available custom stained to match virtually any real wood finish.

- Proprietary PUR HotCoat Technology
- Water Free Polyurethane
- Higher flexibility than water based UV finishes
- PUR HotCoat provides high water and temperature resistance to the finish
- No veneer discoloration
- No Formaldehyde emissions
- Suitable for tight wrapping radiuses - the lowest in the industry!
- Same day service and small order quantities available on stock items
- Available in most species, thicknesses, and widths
- Quick lead times for non-stock species and widths
- Available in most reconstituted wood veneer patterns
- Custom Coloring Available
